Educators who work with students with disabilities have the unique challenge of providing comprehensive and quality educational experiences for students who have a wide range of abilities and levels of focus. Pedagogies and educational strategies can be applied across a student population, though they tend to have varied success. Developing adaptive teaching methods that provide quality experiences for students with varied disabilities are necessary to promote success for as many of these students as possible. Special Education Design and Development Tools for School Rehabilitation Professionals is a comprehensive research publication that examines special education practices and provides in-depth evaluations of pedagogical practices for improved educational experiences for students with disabilities. Highlighting a range of topics such as bilingual education, psychometrics, and physical education, this book is ideal for special education teachers, instructors, rehabilitation professionals, academicians, school administrators, instructional designers, curriculum developers, principals, educational software developers, researchers, and students.

Describes in accessible language what science knows about the characteristics and causes of late talking, explaining that today's greater awareness of autism, and the expanded definition of autism as a "spectrum" of symptoms, has increased the chances that a late-talking child will be diagnosed—or misdiagnosed—with autism. Simultaneous eBook.

The current study sought to identify the unique needs of typically developing children living in a household with a brother or sister with a diagnosis of Autism Spectrum Disorder. Previous research in the area has focused on the use of sibling support groups when assisting typically developing siblings in coping with having a brother or sister with Autism Spectrum Disorder. While sibling support groups have been the most prominent method discussed in assisting siblings, the current research identifies coping mechanisms utilized in assisting typically developing siblings, as well as what forms of support have been most beneficial in assisting the typical siblings. Finally, research sought to identify what the parents' felt key factors were in maintaining and strengthening positive relationships between siblings when one child has a diagnosis of Autism Spectrum Disorder.

Two of the biggest mistakes of the 20th Century may be the use of polyvinyl chloride, also known as PVC, in baby mattresses and the aggressive use of unproven baby and infant vaccines. Both PVC and vaccines contain dangerous heavy metal toxins. The epidemics of Sudden Infant Death and the spectrum of autistic disorders have grown in parallel with the growing use of PVC and vaccines. Dr. Davis' emergency medicine career has witnessed many events that support his accusations. This book provides parents with little known but important facts that suggest both PVC and vaccines can be deadly or disabling alone or in combination with each other. Most importantly, Dr. Davis offers parents, who wish to become advocates, steps that can be taken to protect their babies from the oversights and greed of the petrochemical, pharmaceutical and medical industries before it is too late.
