Asus Eee PC For Dummies makes it easier!

This book constitutes the refereed proceedings of the 8th IFIP WG 6.1 International Conference on Distributed Applications and Interoperable Systems, DAIS 2008, held in Oslo, Norway, in June 2008. The DAIS conference was held as a joint event in federation with the 10th IFIP WG 6.1 International Conference on Formal Methods for Open Object-Based Distributed Systems (FMOODS 2008) and the 10th International Conference on Coordination Models and Languages (Coordination 2008). The 19 revised full papers presented together with 6 revised work-in-progress papers were carefully reviewed and selected from 66 submissions. The papers cover all aspects of distributed applications and interoperable systems, including their design, implementation, operation and maintenance, as well as supporting middleware, experimental studies, and advances to software engineering methodologies and tools. The papers are organized in topical sections on service orientation, QoS management and composition, dependability and reliability, peer-to-peer overlays, adaptation, model-driven development, components, protocols and interactions, as well as pervasive computing.

This book presents state-of-the-art research on architectures, algorithms, protocols and applications in pervasive computing and networks! With the widespread availability of wireless and mobile networking technologies and the expected convergence of ubiquitous computing with these emerging technologies in the near future, pervasive computing and networking research and applications are among the hot topics on the agenda of researchers working on the next generation of mobile communications and networks. This book provides a comprehensive guide to selected topics, both ongoing and emerging, in pervasive computing and networking. It contains contributions from high profile researchers and is edited by leading experts in this field. The main topics covered in the book include pervasive computing and systems, pervasive networking security, and pervasive networking and communication. Key Features: Discusses existing and emerging communications and computing models, design architectures, mobile and pervasive wireless applications, technology and research challenges in pervasive computing systems, networking and communications Provides detailed discussions of key research challenges and open research issues in the field of autonomic computing and networking Offers information on existing experimental studies including case studies, implementation test-beds in industry and academia Includes a set of PowerPoint slides for each chapter for instructors adopting it as a textbook Pervasive Computing and Networking will be an ideal reference for practitioners and researchers working in the areas of communication networking and pervasive computing and networking. It also serves as an excellent textbook for graduate and senior undergraduate courses in computer science, computer engineering, electrical engineering, software engineering, and information engineering and science.

Singapore's leading tech magazine gives its readers the power to decide with its informative articles and in-depth reviews.
