This EDiR guide has a practical rather than a theoretical focus, and is intended as a reference tool for potential EDiR candidates who would like to gain a better understanding of the EDiR examination. A pool of experts has made every possible effort to create a single source that contains everything needed to successfully pass the EDiR examination. Times have changed, and there is certainly a new generation of radiologists who will find this cutting-edge tool a “must-have” to familiarize themselves with the examination quickly and easily. The book is divided into the following main sections: one chapter for each subspecialty; one chapter on

Safety, Management and Imaging Procedures; another on Principles of Imaging Techniques and Processing; and lastly, one on Management. This structure follows the same pattern as the EDiR examination, which is based on the European Training Curriculum (ETC) for Radiology released by the European Society of Radiology (ESR). Each subspecialty is covered using the same basic structure: Multiple Response Questions (MRQs), Short Cases (SCs) and CORE Cases from one of the most recent EDiR examinations. Students will thus be able to see all the questions from a recent examination and learn from the answers and comments provided by our pool of experts. Clinical cases as electronic supplementary material complete the book, and links to EDiR preparation sessions are also included, allowing students to improve their knowledge of specific areas.

As in all specialties, learning in radiology is a life long process but for radiologists in training there is a vast amount of information to assimilate. In this book the authors have compiled 191 cases to help the reader with the practical aspects of image recognition and differential diagnosis. The selection of cases is broad enough to provide an

A highly illustrated account of modern radiology suitable for medical students and junior doctors.

Exclusively focused on preparing candidates for the FRCR Part 1 anatomy viewing paper, this book enables them to practice questions that have the look and feel of the actual exam. Containing eight practice examinations, each with 20 cases which have been thoroughly

reviewed and tested by radiology registrars who have sat the exam, the questions are at increasing levels of difficulty. Screenshots from Osirix and advice on how to approach the exam familiarize candidates with its format. Each exam in the book contains a wide selection of images with all body parts and modalities equally represented to thoroughly test candidates interpretation skills. The 160 images cover all major plain films, CT, MRI, barium studies and other contrast examinations, as well as some of the newer techniques, based on the examples published online by the Royal College of Radiologists.

A guide for all radiologists reporting MSK studies. Learn how to improve your speed and how to report more studies faster. In the age of artificial intelligence, this book shows you how to increase your value as a radiologists. The book was not written to teach you MSK, but how to apply your knowledge in a systematic manner to increase your output. Nevertheless, the book is packed with knowledge pearls that the Author acquired during his training in New York (NYU) and Zurich (Balgrist) and from his own research.

Best of Five MCQs for the Acute Medicine SCE is a new revision resource designed specifically for this high-stakes exam. Containing over 350 Best of Five multiple choice questions, this dedicated guide will help candidates to prepare successfully. The content mirrors the SCE in Acute Medicine Blueprint to ensure candidates are fully prepared for all the topics that may appear in the exam. Topics range from how to manage acute problems in cardiology or neurology to managing acute conditions such as poisoning. All answers have full explanations and further reading to ensure high quality self-assessment and quick recognition

of areas that require further study.

Completely revised and updated, the fourth edition of Aunt Minnie's Atlas and Imaging-Specific Diagnosis is an excellent study tool for radiology board examinations. This classic textbook is divided into all radiology subspecialties written by experts in their academic fields and includes images, history, findings, diagnosis, and discussion. "Aunt Minnie's Pearls" at the end of each case help reinforce the key features and provide a quick review of major salient points. Perhaps the largest single collection of Aunt Minnie-like cases in any one publication, it features more than 380 cases and over 1,000 images representing all modalities and subspecialties in diagnostic imaging.

The aim of this book is to present statistical problems and methods in a friendly way to radiologists, emphasizing statistical issues and methods most frequently used in radiological studies (e.g., nonparametric tests, analysis of intra- and interobserver reproducibility, comparison of sensitivity and specificity among different imaging modality, difference between clinical and screening application of diagnostic tests, ect.). The tests will be presented starting from a radiological "problem" and all examples of statistical methods applications will be "radiological".

Now updated to reflect the USMLE Step 2 exam, with greater emphasis on case presentations and diagnostic skills. Approximately 400 new clinical vignettes with accompanying questions (500 questions in all)--now featuring expanded answers referenced to leading textbooks or

journal articles. Reviewed by McGraw-Hill's Medical Student Advisory Committee to ensure simulation of the USMLE test-taking experience.

This book provides an up-to-date and comprehensive primer on image-guided interventions for cancer. Image-guided interventional oncology is gaining popularity as it is a minimally invasive and more precisely targeted approach that both proves more effective and results in fewer side effects. This book's aim is to provide a clinical guide to interventional oncology for the entire oncology team. Chapters are approached with the same interdisciplinary perspective that is used in the care itself, with each chapter written by an interventional radiologist with contributions from medical, surgical and/or radiation oncologists. Chapters cover the major cancers that can benefit from interventional oncology treatment (including lung, liver, kidney, and bone), as well as some of the physics and physiology behind these interventional modalities. This is an ideal guide for interventional radiologists, medical oncologists, surgical oncologists, radiation oncologists, as well as relevant trainees.
