consequences of this ever-growing industry and movement. The book investigates the significance and consequences of the robot invasion in an effort to map the increasingly complicated social terrain of the twenty-first century. Whether we recognize it as such or not, we are in the midst of a robot invasion. What matters most in the face of this machine incursion is not resistance, but how we decide to make sense of and respond to the social opportunities and challenges that autonomous machines make available. It goes without saying that robots kill. They hunt, swarm, and fire lasers from their eyes. They even beat humans at chess. So who better to stand with us when the real villains arrive? Movies instruct us that, whether we like it or not, we will one day be under siege by pirates, ninjas, zombies, aliens, and Godzilla. Also great white sharks. And-let's face it- we're not prepared. But with the advice contained in this

Robot Army is the ideal book for readers of any age.

Two decades into the future humans are battling for their very survival when a powerful AI computer goes rogue, and all the machines on earth rebel against their human controllers.

Artificial Intelligence (AI) is changing all aspects of communications and journalism as automatic processes are being introduced into all facets of classical journalism: investigation, content production, and distribution. Traditional human roles in these fields

are being replaced by automatic processes and robots. The first section of this book focuses on a discussion of AI, the new emerging field of robot journalism, and the opportunities that AI limitations create for human journalists. The second section offers examples of the new journalism storytelling that empower human journalists using new technologies, new applications, and AI tools. While this book focuses on journalism, the discussion and conclusions are relevant to all content creators, including professionals in the advertising industry,

obsolete. You think you are special, unique, and that whatever it is that you are doing is impossible to replace. You are wrong. As we speak, millions of algorithms created by computer scientists are frantically running on servers all over the world, with one sole purpose: do whatever humans can do, but better. That is the argument for a phenomenon called technological unemployment, one that is pervading modern society. But is that really the case? Or is it just a futuristic fantasy?
