Learning his long-lost sister is being kept at a mysterious clan's base, Romulus Buckle must rescue her to gain the key to victory over the Founders, but this rescue attempt means abandoning his allies to face the Founders' raids alone.

From the bestselling author of the acclaimed Chaos and Genius comes a thoughtful and provocative exploration of the big ideas of the modern era: Information, communication, and information theory. Acclaimed science writer James Gleick presents an eye-opening vision of how our relationship to information has transformed the very nature of human consciousness. A fascinating intellectual journey through the history of communication and information, from the language of Africa's talking drums to the invention of written alphabets; from the electronic transmission of code to the origins of information theory, into the new information age and the current deluge of news, tweets, images, and blogs. Along the way, Gleick profiles key innovators, including Charles Babbage, Ada Lovelace, Samuel Morse, and Claude Shannon, and reveals how our understanding of information is transforming not only how we look at the world, but how we live. A New York Times Notable Book A Los Angeles Times and Cleveland Plain Dealer Best Book of the Year Winner of the PEN/E. O. Wilson Literary Science Writing Award

"A fascinating political, racial, economic, and cultural tapestry" (Detroit Free Press), a tour de force from David Maraniss about the quintessential American city at the top of its game: Detroit in 1963. Detroit in 1963 is on top of the world. The city's leaders are among the most visionary in America: Grandson of the first Ford; Henry Ford II; Motown's founder Berry Gordy; the Reverend C.L. Franklin and his daughter, the incredible Aretha; Governor George Romney, Mormon and Civil Rights advocate; car salesman Lee Iacocca; Police Commissioner George Edwards; Martin Luther King. The time was full of promise. The auto industry was selling more cars than ever before. Yet the shadows of collapse were evident even then. "Elegiac and richly detailed" (The New York Times), in Once in a Great City David Maraniss shows that before the devastating riot, before the decades of civic corruption and neglect, and white flight; before people trotted out the grab bag of rust belt infirmities and competition from abroad to explain Detroit's collapse, one could see the signs of a city's ruin. Detroit at its peak was threatened by its own design. It was being abandoned by the new world economy and by the transfer of American prosperity to the information and service industries. In 1963, as Maraniss captures it with power and affection, Detroit summed up America's path to prosperity and jazz that was already past history. "Maraniss has written a book about the fall of Detroit, and done it, ingeniously, by writing about Detroit at its height...An encyclopedic account of Detroit in the early sixties, a kind of hymn to what really was a great city" (The New Yorker).

Unlock the lost and hidden meanings of the world's ancient and modern signs and symbols with the latest in the hugely popular series of 'Element Encyclopedias'. This is the biggest A-Z reference book on symbolic objects you'll ever find.

16th-century classic debunks witchcraft but offers remarkable primary source of information on witchcraft, witch trials, practice of the black arts. Introduction by Montague Summers. 17 illustrations.

This book explores and explains scientific mysteries and principles, leavened with tongue-in-cheek humor and an abundance of illustrations. Chapters are short, but give an understanding of technology and science not available elsewhere. Questions include: • What holds a satellite up while it goes around the Earth? • Why is the sky (made out of clear air!) blue instead of green, or just black as night like the sky that high altitude jumper Felix Baumgartner saw? • How is laser light different from "normal" light? • Did Columbus really discover that the Earth is round? • Which one invention will assuredly survive our civilization? • Why can't you travel back in time? If you often feel embarrassed because you don't have a clue about lasers, the difference between volts, amps and watts, or how jet planes really work - but you would like to understand the physical principles of our modern world, whether you're a teen or a parent - this book is for you! To understand the basics of quantum mechanics, or of protons, neutrons and electrons, you don't need algebra, calculus, or a lot of equations or technical buzzwords. Too many people have been soured on science by science teachers who have made simple concepts seem complex. This book is the antidote: all it requires is your curiosity. Advance praise for No Wonder You Wonder!: "From beginning to end, and with laugh after laugh, I enjoyed every single word of this remarkable book. Phipps is a hell of a good writer, and the kind of physics teacher that I would have loved as a young student. No Wonder You Wonder can be engrossing for anyone with a bit of curiosity, not just the scientific minded." - Christophe Bonnal, Chief Engineer, CNES (French Space Agency) "No Wonder You Wonder is a fantastic book. Covering topics such as space, matter, and the energy within the universe, this book does an excellent job of clarifying these topics. It's a great read for young scientists and aspiring physicists." - August R., high school freshman

Egyptologist Gerald Massey challenged readers in A Book of the Beginnings to consider the argument that Egypt was the birthplace of civilization and that the widespread monotheistic vision of man and the metaphysical was, in fact, based on ancient Egyptian myths. In The Natural Genesis, Massey delivers a sequel, delving deeper into his compelling polemic. Volume II provides detailed discourse on the Egyptian origin of the delicate components of the monotheistic creed. With his agile prose, Massey leads an adventurous examination of the epistemology of astronomy, time, and Christology-and what it all means for human culture. British author GERALD MASSEY (1828-1907) published works of poetry, spiritualism, Shakespearean criticism, and theology, but his best-known works are in the realm of Egyptology, including A Book of the Beginnings and Ancient Egypt: The Light of the World.

Whether you want to learn lockpicking or locksmithing, or choose locks that are virtually impossible to defeat, this classic will meet your needs. The top reference in the field since 1976, this book is perfect for everyone from beginners who want to master techniques step by illustrated step, to pros who need an up-to-date, comprehensive shop manual. The Sixth Edition features: •Complete, illustrated coverage from a master locksmith. •Techniques and tips for lockpicking and fixing. •Safe opening and servicing techniques. •Coverage of electronic and high-security mechanical locks. •Auto lock opening and servicing how-tos. •An all-new Registered Locksmith test. •How to conduct a home security survey •How to start and run a locksmithing business, or get hired as a locksmith.

Jones, Barry Owen (1932-). Australian politician, writer and lawyer, born in Geelong. Educated at Melbourne University, he was a public servant, high school teacher, television and radio performer, university lecturer and lawyer before serving as a Labor MP in the Victorian Parliament 1972-77 and the Australian House of Representatives 1977-98. He took a leading role in reviving the Australian film industry, abolishing the death penalty in Australia, and was the first politician to raise public awareness of global warming, the 'post-industrial' society, the IT revolution, biotechnology, the rise of 'the Third Age' and the need to preserve Antarctica as a wilderness. In the Hawke Government, he was Minister for Science 1983-90, Prices and Consumer Affairs 1987, Small Business 1987-90 and Customs 1988-90. He became a member of the Executive Board of UNESCO, Paris 1991-95 and National President of the Australian Labor Party 1992-2000, 2005-06. He was Deputy Chairman of the Constitutional Convention 1998. His books include Decades of Decision 1860- (1965), Joseph II (1968), Age of Apocalypse (1975), and he edited The Penalty is Death (1968). Sleepers, Wake!: Technology and the Future of Work was published by Oxford University Press in 1982, became a bestseller and has been translated into Chinese, Japanese, Korean, Swedish and braille. The fourth edition was published in 1995. Knowledge Courage Leadership, a collection of speeches and essays, appeared in 2016. He received a DSc for his services to science in 1988 and a DLitt in 1993 for his work on information theory. Elected FTSE (1992), FAHA (1993), FAA (1996) and FASSA (2003), he is the only person to have become a Fellow of four of Australia's five learned Academies. Awarded an AO in 1993, named as one of Australia's 100 'living national treasures' in 1997, he was elected a Visiting Fellow Commoner of Trinity College, Cambridge in 1999. His autobiography, A Thinking Reed, was published in 2006 and The Shock of Recognition, about music and literature, in 2016. In 2014 he received an AC for services 'as a leading intellectual in Australian public life'. What Is to Be Done was published by Scribe in 2020.
