This volume in the highly respected Cambridge History of Science series is devoted to the history of science, medicine and mathematics of the Old World in antiquity. Organized by topic and culture, its essays by distinguished scholars offer the most comprehensive and up-to-date history of ancient science currently available. Together, they reveal the diversity of goals, contexts, and accomplishments in the study of nature in Mesopotamia, Egypt, Greece, Rome, China, and India. Intended to provide a balanced and inclusive treatment of the ancient world, contributors consider scientific, medical and mathematical learning in the cultures associated with the ancient world.

The famous brich-bark manuscript in the Kharosthi script, which contains a recension of the Dharmapada in a Prakrit dialect, has long been familiar to students of early Buddhist literature under the name of 'Ms. Dutreuil de Rhins'. The manuscript, written in the first or second century A.D., is generally considered to be the oldest surviving manuscript of an Indian text. It was discovered near Khotan in Central Asia in 1892, and reached Europe in two parts, one of which went to Russia and the other to France. In 1897 S. Oldenburg published one leaf of the Russian portion; and in 1898 E. Senart edited the French material in the Journal Asiatique, together with facsimiles of the larger leaves, but not of the fragments. Now, almost seventy years after the discovery of the manuscript, it is possible for the first time to place before scholars an edition of the whole of the extant material, together with complete facsimiles.

Addressing the gap in the literature between pediatric medicine and geriatric medicine, Cerebrospinal Fluid Disorders examines the disorders of the cerebrospinal fluid (CSF) pathways from birth to old age. Highlights of the book include: Comprehensive content detailing CSF disorders and their effects on the brain and spine at all developmental stages Key updates to recent developments that physicians can utilize in their practice Clear organization with each section divided into background information, disease discussion, surgical aspects, controversies, and social issues—giving readers quick access to the most important information needed to properly diagnose and manage patients with CSF disorders Multidisciplinary content written by clinicians representing a host of specialties, making the book useful for not only neurologists, but also those in related specialties involved in treating CSF disorders, including neurosurgery, pediatrics, general practice, ophthalmology, radiology, and emergency medicine Expert patient communication tips to help practitioners deliver information to patients and their caregivers on highly sensitive issues, such as alternative treatments, quality-of-life issues, and medico-legal aspects More than 400 illustrations to clarify content Exploring the management of the resultant effects of such disorders on both the brain and spine throughout the body ' s changes in development, the book is written by more than 50 global experts in neurology and related disciplines. Their combined wisdom offers the most effective diagnostic and management guidelines for treating patients with CSF disorders.

The Miracle of Death comes to us at a time when transformation is necessary for our survival. Every page of this testament to life loosens our grip on the imagination and opens us to dimensions of the mind that speak in images, metaphors and symbols. We emerge from these experiences surrounding death with an expanded view of life, a path more illuminated, and the courage to live by the wisdom of our visions. We adjust our senses to experience new ways of hearing, seeing and knowing what is real. We go inward on our own journeys to confront the mysteries of our existence, the mysteries of life and death, and we return knowing how to live our lives.Foreword by Anne Baring. Includes Index & Further Reading.

The LNCS Journal on Data Semantics is devoted to the presentation of notable work that addresses research and development on issues related to data semantics. Based on the highly visible publication platform Lecture Notes in Computer Science, this journal is widely disseminated and available worldwide. The scope of the journal ranges from theories supporting the formal definition of semantic content to innovative domain-specific applications of semantic knowledge.

Hydrocephalus is one of the most common diseases of pediatric and adult neurosurgery. With the introduction of modern neurosurgical procedures, this disease has become a life-long problem. Even with optimal treatment, there is still significant morbidity and mortality along with a significant cost to the medical system. This has caused patients and their families to demand improvements in treatments and forced clinicians to evaluate their treatments in large consortiums while utilizing both genetics and technology to improve outcomes or avoid placement of shunt all together. This text is designed to present the current treatments for hydrocephalus across the lifespan. The foundation for understanding cerebral spinal fluid (CSF) abnormalities begins with the understanding of physiology and pathogenesis of disease. These chapters are written by published experts in the field and detail the significant advances in the detection of CSF abnormalities. This section will discuss the current advances in imaging and current research in biomarkers for both pediatric and adult patients. We will then systematically discuss the treatment of both pediatric and adult CSF disorders. These will be broken down by cause, since the physiology of each can be different. We will end the book with a discussion both of the technological advances and a discussion of consortiums and how they have advanced treatment of this chronic disease.
