This new volume of *Methods in Cell Biology* looks at methods for analyzing centrosomes and centrioles. Chapters cover such topics as methods to analyze centrosomes, centriole biogenesis and function in multiciliated cells, laser manipulation of centrosomes or CLEM, analysis of centrosomes in human cancers and tissues, proximity interaction techniques to study centrosomes, and genome engineering for creating conditional alleles in human cells. Covers sections on model systems and functional studies, imaging-based approaches and emerging studies. Chapters are written by experts in the field. Cutting-edge material

Originally released by Knopf in 1996, Lutz's rigorously innovative debut barely made a ripple in the mainstream publishing world, and a paperback edition was never published. Meanwhile, however, the book attained a cult status, and its influence has grown tremendously since its initial publication. "Gary Lutz is one of the rarest and purest of our treasured literary artists. His authentic language conquers any habit of speech. Let the reader prepare for the first known examples of the most crucial and intimate matters of the heart and mind"--Diane Williams.

Residential, Commercial and Industrial Electrical Systems is a comprehensive coverage on every aspect of design, installation, testing and commissioning of electrical systems for residential, commercial and industrial buildings. This book would serve as a ready reference for electrical engineers as well as bridge the gap between theory and practice, for students and academicians, alike. Volume 1: Equipment and Selection provides its readers a detailed description of various equipment typically used in electrical distribution system. Along with the working principle and procurement methods, the book discusses selection criteria of different electrical equipment
